12

Stabilised Quality End Result

Why Paste instead of powder/dust

Most of the industry leading chefs believe that by using pulpy paste prepared from fresh vegetables / spices enhances the quality of the final recipe giving best of the aroma, taste and texture to the preparation, which is the secret of the speciality kitchen...

Our Motto

At CNC Food India Pvt. Ltd., we are committed to redefining convenience cooking through innovation and technology. Our focus is on delivering healthy, preservative-free alternatives to essential kitchen ingredients in the most practical and ready-to-use format.

With our state-of-the-art manufacturing facility in Guwahati, Assam, we specialize in producing Zero% Preservative-Free Ginger and Garlic Pastes that meet the highest standards of quality, taste, and safety.

Purpose of use new Sterilization Technology

In Zero% food products, we insist on Preservative-free food ingredients which are natural, minimally processed components that do not contain artificial or chemical preservatives to extend shelf life. These ingredients rely on freshness, natural preservation and new-age packaging methods like hot filling and full-proof sealing and sterilization technology to maintain quality. Many consumers prefer preservative-free foods due to potential health benefits, as artificial preservatives like sulfites, nitrates, and benzoate have been linked to allergies and other health concerns. Choosing preservative-free ingredients supports a healthy diet and often enhances the natural flavours of food. Zero% believes in environment friendly and pro-health product development and our products line contributes to the same.
